## global conservatory roof

When it came to choosing a suitable roof system to compliment the aesthetics of the Synergy profile system, the choice was already made for us.

Synseal not only produce the Synergy profile system but also the Global Roof system. This means that the Global roof has been designed with Synergy in mind.

The two systems fit seamlessly together and give complete balance to their appearance.

### Looks

The Global roof features the same low sightline gaskets as the window system meaning that you see the profile and not the gasket.

Decorative mouldings are incorporated to allow the elegant curves of the window system to tie in with those of the roof.

The roof can be complimented by the addition, at no extra cost, of decorative crestings and finials.

Because the system is manufactured by the same supplier, colour match is identical.

### Security and Design Features

The roof cannot be unbolted from the outside, due to an ingenious system using a large M8 bolt that means the roof is secured internally.

Using a captive bolt mechanism, there is no need to drill holes in the glazing bars as with other roof systems. This eliminates water penetration through "fixing holes".

The roof top finials have also been designed to fix without unnecessary holes being drilled.

### Roof & Glazing Options

The roof is available with either 24mm or 35 mm polycarbonate and each of these options allows for a variety of polycarbonate colours and effects.

As an alternative, the roof can accept 24mm double glazed units in clear, tinted or self-cleaning glass.

To assist with airflow, particularly during warmer months, there is the option of a manually or electrically operated roof vent.

### Manufacture

At Swadlincote Windows we have the ability to manufacture the Global roof at our factory premises. All roofs are tested for quality and are pre-built, then dismantled, before they leave our site.

**So, there you have it. A Roof and Profile system that were literally "*made for each other...*"**
